

Surface mounted magnetic switch door contact

This sensor is essentially a reed switch, encased in an ABS plastic shell. Normally the reed is 'open' (no connection between the two wires). The other half is a magnet. They're often used to detect when a door or drawer is open, which is why they have mounting tabs and screws. You can also pick up some double-sided foam tape from a hardware store to mount these, that works well without needing screws.

Others,

We offer:

- 1.cheap door sensor
- 2.best quality magnetic switch
- 3.alarm system accessories
- 4.security door control with fast deliver
